

AppleEnvironmental

Meth Decontamination Specialist Training

December 14 & 15, 2017 | 8:00 - 4:30 | \$399

Course Introduction:

Proper education is key to your success whether you are adding Meth Decontamination Services to your existing remediation or crime scene business or starting a new business focusing on Meth Clean Up services. In a hands on, multimedia, two-day training this intensive course will provide you with knowledge and know-how to decontaminate meth labs and user sites effectively using the latest scientific data, products, and processes. Use your new found knowledge to communicate confidently with your clients, impress local officials, and become the decontamination expert in your area.

Course Description:

Apple Environmental's two-day course teaches you:

- the background of methamphetamine
- meth labs and their creation
- the dangers involved inside a meth lab property
- site safety
- performing a site assessment
- creating a work plan
- the process of decontamination
- proper waste disposal
- confirmation sampling
- state and local standards
- how to prepare a final report

Also, in order to complete a decontamination job first you need to have clients—part of the course will focus on marketing your new services and how to create an army of referrals. Two IICRC continuing education credits are available upon request at registration.

Course Details:

The class is being offered **December 14-15**, 2017 at Interlink Supply, 4565 West 77th Street, Edina, MN. Contact Krista McBreen at 952-926-7117 to reserve your spot.

Trainers:

Kameron Thorne and Mark Shepard are Certified Decontamination Specialists working daily in the meth decontamination industry. Kameron has a background in business coaching, marketing, quality control, and decontamination services. Mark specializes in property management, business development, and is our decontamination guru.
