

RELIEF

DESCRIPTION:

Relief is a powerful enzymatic prespray, concentrated into a powder to maximize efficiency in the field. The enzymes in Relief were specifically selected for their ability to remove fats and oils that have been worked into carpet fibers. This makes this product an ideal choice for high traffic areas and environments that tend to experience a lot of protein and oil based soils, such as restaurants. Relief should be used in hot water (at least 100° F) and can be used in temperatures as warm as 150° F to maximize effectiveness in removing oils and greases.

DIRECTIONS:

Dilute 1:64 (2 oz. or one scoop per gallon) and mix thoroughly. Relief is only active above 100° F and the ideal temperature range is 120°-140° F. Lower temperature water will result in lower performance. Do not apply if the indoor air temperature is below 60° F, the enzymes will cool off before they can penetrate into the stains and soils. Spray Relief onto the carpet and let sit for 15 minutes before extracting. After extraction, rinse out with a rinse aid such as Remove.

PACKAGING OPTIONS:

- 4/7#
- 40#
- 400#

SPECIFICATIONS:

Appearance: Yellow powder

Odor: Slight lemon

pH: 11

Storage: Store in tightly closed containers.
